Isoforms 1 and 2 are present in dorsal root ganglion, sciattic nerve and PC12 cells after longer exposure. Isoforms 2 and 3 are detected in kidney, cartilage, skin, lung and spleen. Isoform 3 is expressed at high level in skeletal muscle. In adult animals isoform 1 is expressed

Muscle M-line assembly protein unc-89 (Uncoordinated UNC-89 OR CO9D1.1.
Caenorhabditis elegans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    these signals, localizes, and then participates in a W-line.

TISSUE SPECIFICITY: Localizes to the middle of A-ban-
SIMILARITY: Contains 1 DBL-homology (DH) domain.

SIMILARITY: Contains 1 fibronectin type III domain.

SIMILARITY: Contains 49 immunoglobulin-like C2-type.

SIMILARITY: Contains 1 PH domain.

SIMILARITY: Contains 5 RCSD domains.

SIMILARITY: Contains 5 RCSD domains.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
